

Empathy Map

Date: 29 September 2026

Team ID: 6ab4cbbb0fc666a751b50cda

Project Name: AI-Augmented Backend Development

Maximum Marks: 4 Marks

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

DOES • Uses AI-Augmented Backend Development for fitness-related functionality. • Uses secure authentication to access the application. • Uses stored application data and AI-assisted functionality.	FEELS • Wants confidence that access to the API and application is secure. • Wants reassurance that application data is stored reliably. • Feels supported when AI functionality is available.
SAYS • I want to use AI-Augmented Backend Development for my fitness needs. • I want secure access to my account and application data. • I want useful AI-assisted functionality.	THINKS • My information should be handled securely. • The application should reliably store my data. • AI features should be useful for my fitness-related needs.

PERSONA

NAME: AI-Augmented Backend Development User

(Role / User Type): Fitness application/API user

Source-based note: The supplied project configuration identifies the FitTrack project and includes MongoDB, JWT authentication, and Gemini integration. The project name has been changed to AI-Augmented Backend Development as requested.
